28/2/66

Remarks.

A polar ~~northerly~~ current of wind prevails over the whole of the British Isles. On the northeastern coasts the winds are strong & the sea high. Barometric pressure has oscillated considerably in the north; places on the French coasts it has continued to diminish. At Rochefort the barometer has fallen to about 29 inches, with strong westerly winds & considerable sea.

Cautionary telegrams have been sent to ~~certain portions of~~ certain portions of our coasts this morning - the northern and northeastern coasts were cautioned on Monday.

Thermometer exposed in shade

1/3/66

Remarks

The British Isles are still under the influence of northerly & easterly winds. The fall of snow on the northern coasts has been heavy, & temperatures have fallen in Ireland, as well as on the coasts of England & Scotland. Barometers have risen a little since yesterday but they are now again falling on the western coasts.

The area of least barometric pressure was yesterday in the neighbourhood of Paris, & to the southward of the latitude of Paris the winds were southerly & westerly. About the line of meeting of the northerly & southerly winds the fall of rain appears to have been very large. At L'Orient, between the mornings of Tuesday & yesterday, as much as 2.65 inches of rain fell.

2/3/66

Remarks

Near the entrance of the Channel it blew heavily last night from an easterly direction & the winds are still strong from the same quarter.

Barometers continue to be lower on the French coasts than elsewhere. Temperatures have increased slightly & in some instances the winds have backed to the westward, but the prevailing current is still northeasterly.

Yesterday morning an area of low barometric pressure apparently existed near the Bay of Biscay, — with winds from southeast over France and from southwest over Spain.

Remarks

On Saturday barometers were comparatively low & uniform over the greater portion of Europe - varying from 29.5 to 29.7 - with southerly & westerly winds on the northern & western coasts, while a northeasterly current prevailed over ~~central~~ central Europe and strong winds from various directions on the coasts of the Mediterranean.

Since Saturday, northeast & southwest winds have alternated on the Scotch & Irish coasts, - producing some snow hail & rain. Barometric pressure has oscillated considerably, and is now diminishing. ~~the~~ northern temperatures have again fallen. Our northern & west coasts have been cautioned today.

Barometer exposed in shade

Remarks

6/3/66

~~Since yesterday~~ Barometric pressure has decreased rapidly over the British Isles and temperatures generally have risen. Last night the winds were very strong on our west and southwest coasts, where rain with snow or hail was very general.

Over central Europe yesterday barometric pressure varied from 29.6 to 29.8 inches, in the south of Spain it rose to about 30 inches and in the Gulf of Bothnia it fell to about 29.4 inches. In the north of Europe the prevalent winds were ~~light and~~ southerly and light, on the west coasts of France ~~and Spain~~ northerly and in the Mediterranean easterly.

7/3/66

Remarks

The meeting or intermingling of northerly and southerly currents of wind over this country has caused considerable falls of snow, rain, & hail. The snow & hail has fallen chiefly on the northern & western coasts. The ~~winds on our southeastern coasts have been comparatively moderate~~, but ~~a~~ strong gale from southeast blew last night on the coasts of Yorkshire & Northumberland.

In the Bay of Biscay ~~the winds~~ the winds are ~~fresh~~ fresh from southwest with a heavy sea. The weather appears likely to continue unsettled. Cautionary telegrams were sent yesterday morning to

such portions of ~~our~~ the coasts as had
not been cautioned the previous day.

Thermometer exposed in Shade

Remarks

8/3/66

Since yesterday barometers have risen about six tenths of an inch in the north of the British Isles and from two to three tenths in the south; and temperatures generally have also slightly increased ~~and~~ except on the south coast of England. Rain, with hail or snow in places, has again been very general on all our coasts.

Yesterday a band of low barometric pressure extended in a NW and SE direction across Europe, separating one ~~an~~ area of moderately high pressure in the northeast ~~of Europe~~ from another in the southwest ~~of Europe~~. Light to moderate easterly winds were prevalent in the north of Europe, and moderate to strong westerly winds in the south.

NORTHERN = Scotland. WESTERN = Ireland, Wales, and adjacencies. SOUTHERN = English Channel and Bay of Biscay. EASTERN = Eastward England and North Sea.

Barometer corrected and reduced to 32° at sea level. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), since last report.

Thermometer Exposed in Shade

9/3/66

Remarks

Northerly (northeast to northwest) winds prevail today over the British Isles on the French coasts & apparently also across the north sea.

On the ~~Scotch~~ coasts of Scotland & Ireland the weather has become moderate but in the Channel the winds are strong from northeast.

The very rapid increase of barometric pressure during the last two days - amounting to about an inch on the northern & western coasts - is probably not indicative of ~~further~~ unsettled weather.

10/3/66

Remarks

Barometric pressure has continued to increase over northern Europe and northerly winds prevail over the greater portion of the British Isles ~~and~~ of the continent. On the other hand, on the ~~the~~ Mediterranean coasts barometers fell yesterday to about 29.5 inches with strong southwesterly winds.

~~The recent sudden rise of barometers in~~

The rapidity of the recent increase of pressure, a slight increase of temperature on our western coasts, the general ~~clouding~~ prevalence of cloud, & the backing of the winds on the Scotch coasts to northwest & southwest seem to indicate the probability of the existence of an upper southerly current of wind over this country at the present time.

Thermometer Exposed in Shade

Remarks 13/3/66

Last night barometers fell nearly as low on our southern and eastern, ~~coasts~~ as they had previously been on our northern coasts; but ~~xxx~~ at present they are generally rising. The winds were strong and squally, and rain, with hail in a few places, was pretty general.

Yesterday barometric pressure was ~~moderately~~ much higher in the southwest of Europe than in the north and east, being about 30·20 inches over France and Spain and about 29·45 inches at St Petersburg and Odessa.

14/3/66

Remarks

A fresh diminution of barometric pressure has succeeded the increase of yesterday. Barometers on the French & Spanish coasts have also fallen. Temperatures are lower. — at Skuddesnoes (coast of Norway) the temperature has fallen to 19°F. The winds reported this morning are extremely variable in direction. Cautionary telegrams have been sent to the western coasts.

Remarks

The reports received to-day show very great atmospheric disturbance.

The winds have backed to southwest and southeast and on the southwestern coasts have increased to ~~a~~ gale.

Barometers are still falling. - At Valentia, in the neighbourhood of which place the area of least pressure exists at present, ~~the~~ barometer has fallen to 28.7 inches, - with an increase of temperature. ck

Pressure has also diminished ~~over the~~ over Europe generally. -

Cautionary telegrams have been sent to the ~~the~~ southern & eastern coasts this morning; the other coasts were cautioned yesterday. -

Thermometer exposed in shade

Remarks

Yesterday afternoon or last night barometers again fell in the United Kingdom, ~~and~~ they still continue low and unsteady. The winds were very strong and squally on our southwest coasts and rain has been very general on our south and west coasts.

Barometric pressure yesterday was low over the whole of western Europe ~~and~~ as well as in the neighbourhood of the Black Sea, but high in the Baltic and in the Gulfs of Riga and Finland – the highest being about 30·15 inches at Helsingfors. Very strong southerly winds prevailed in the Bay of Biscay and in the Gulf of Lyons

20/3/66

Remarks

The atmospheric conditions existing over this country remain nearly the same as yesterday.

Barometric pressure is increasing ~~the~~ but barometers on the southern coasts are still low.

The prevailing winds are easterly but the existence of an upper current of a different nature is rendered probable by the prevalence of cloud & mist, - with rain in places.

~~Similar~~ Weather of a similar character appears to have prevailed yesterday over the greater portion of Europe, - easterly winds with an overcast sky & rather low barometric pressure.

...nd, in places, to SW.

PROBABLE

	Thursday.	Friday.
ON NORTHERN COASTS	NE to NW fresh to strong - squally	NNW to W ~~SW~~ fresh to strong unsettled
WESTERN	NE to NW moderate to strong with some rain -	Varying winds moderate to strong - unsettled
SOUTHERN	As next above and, in places, to SW.	As next above
EASTERN	NE to NW fresh or strong snow or rain.	NNE to WNW fresh to strong - squally

NORTHERN = Scotland. WESTERN = Ireland, Wales, and adjacencies. SOUTHERN = English Channel and Bay of Biscay. EASTERN = Eastward England and North Sea.

Barometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), since last report.

21/3/66

Remarks

~~Atmospheric pressure (temper.)~~ Barometers have continued to rise gradually and the winds ~~(lower)~~ are still chiefly northeasterly.

The evidence of the existence ~~of southerly winds, as~~ an upper southerly current over the British Isles, afforded yesterday by the prevalence of cloud & partial falls of rain & snow, has been ~~just~~ confirmed this morning by the presence of southerly winds ~~on the lower surface~~ on the coasts both of Norway and western France.

With so much apparent intermingling of different currents of wind settled weather can scarcely be anticipated at present.

Yesterday an area of low barometric pressure existed in the Bay of Biscay with strong southerly & westerly winds over Spain, while over northern France & the British Isles the winds were from the eastward and northward.

13/7/64 - Hamburg (Merdky) - desired by Senate to thank

The Shortest ~~line~~ way to Cuxhaven from London is ~~by the Hague~~ main

is to address to the Directors of the Telegraphic line to Cuxhaven at Hamburg, who have given orders to forward them to Cuxhaven.

/7/64 Stn reply Adt S. says that notices can be sent hence only to those places nearest the sea.

Heligoland has been instructed to inform Sonningen. Similar information will be sent to the Hague whence it can be forwarded as the respective Continental Authorities may ~~direct~~ instruct the Offices at the Hague - if not also at Sonningen.

Memda to that effect enclosed

Cape Clear ...									

23/3/66

Remarks

The diminution of barometric pressure noticed yesterday as having commenced on the western coasts has continued, and extended eastward. At present the area of least pressure is in the neighbourhood of Valentia, ~~that~~ where the barometer has fallen about six tenths of an inch since yesterday morning. The northern & eastern temperatures are still low and snow as well as rain has fallen on the northern coasts.

The winds have backed to the southwest and southeast and are apparently increasing rapidly.

Cautionary telegrams have been sent to the coasts this morning.

The winds over the Baltic yesterday were variable and light - with an overcast sky and in many places snow.

Over the Mediterranean strong westerly winds prevailed, with low barometric pressure.

NORTHERN = Scotland. WESTERN = Ireland, Wales, and adjacencies. SOUTHERN = English Channel and Bay of Biscay. EASTERN = Eastward England and North Sea.

Barometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), since last report.

Remarks

24/3/66

Yesterday ~~morning~~ afternoon or last night the British Isles were visited by a southerly gale, which blew with great violence on the English and Irish coasts; and although the ~~w~~ weather generally is more moderate this morning the wind still continues very high at places. Rain has been very general and hail ~~in spots and lightly~~ fell at Ryanee.

Barometric pressure had increased considerably on the Mediterranean yesterday and slightly on the Baltic.

NORTHERN = Scotland. WESTERN = Ireland, Wales, and adjacencies. SOUTHERN = English Channel and Bay of Biscay. EASTERN = Eastward England and North Sea.

Barometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), since last report.

Remarks

27/3/66

Since yesterday barometric pressure has decreased slightly over England and Scotland, but has increased over Ireland, whilst temperatures generally have risen all over our coasts.

In the north of Sweden and Russia barometric pressure yesterday had risen to ~~about~~ 30·55 in, about half an inch higher than in the Baltic, where there were strong easterly winds ~~prevailed~~; and over France and ~~the Peninsula~~ Spain the pressure had increased to about 30·30 in, from four to five tenths of an inch higher than in the west of Ireland and the south of Italy. Strong northwesterly winds prevailed on the Mediterranean coast of France and light to moderate easterly winds on the coasts of Italy.

Friday. PROBABLE Saturday.

28/3/66

Remarks

Southerly and westerly winds prevail over the ~~[illegible]~~ the British Isles, or the northern & western coasts of France, & across the North sea to the coast of Norway.
Under the influence of these winds temperatures have continued to increase.
The weather is overcast or cloudy with rain in places, & there is but little evaporation. ~~[illegible]~~
Barometric pressure is unsteady, & apparently likely to diminish, with increasing Southerly winds.
